

UniJoint

For WHEEL DOZERS

www.imac.ca

A complete Extreme Service Blade and Push Group that eliminate wear parts for tough applications!

IMAC UniJoint for Wheel Dozers eliminates all the friction wear joints typical to conventional push groups. Instead of diagonal bracing or "wishbone" bracing, IMAC uses stiff push arm members that are joined at the center with a resilient coupling. Full tip capability is maintained even in this extreme service style of blade.

Full Tilt Capability

**Stiff Push Arms
with Resilient Center Joint**

Contact IMAC for all your special moldboard needs.
